

Healthcare: areas at risk

Managing a healthcare facility can be challenging. Safeguard your reputation by eliminating disruptive and costly encounters with pests such as rodents, bed bugs, cockroaches, and birds.

Discover areas where pests pose the biggest risks using Rentokil's industry-specific risk map – a great resource to share with personnel who oversee your pest prevention efforts.

Top 5 hot spots

1. Waiting areas
2. Patient rooms
3. Break rooms
4. Garbage areas
5. Reception areas

Key risks to your business

Birds - Droppings are a slip and fall hazard and may contain harmful bacteria. Nesting materials and feathers can damage equipment and pose a potential fire risk.

Bed bugs - One bed bug encounter can seriously impact a brand's reputation, resulting in liability claims and financial loss.

Cockroaches - Contaminate food and surfaces. Carry bacteria, such as *E. coli* and *Salmonella*.

Flies - Contaminate food and surfaces, spreading *Salmonella* and other types of bacteria that can make people sick.

Rodents - Contaminate food and surfaces and destroy equipment, wiring, and physical structures. Carry harmful diseases and bacteria.

Ants - Contaminate food and surfaces. Bites may cause allergic reactions. Known to infest equipment and cause electrical disruptions.

Don't just imagine your business with no pests... Experience pest-free with Rentokil.
